Care and Maintenance

Thank you for purchasing a New Found Metals portlight. To keep these ports looking great, take a moment to review our care and maintenance tips.

#1 If you own a car or truck, you wouldn't think twice about giving it a regular wash to remove dirt and road residues. Treat your portlights right by keeping them clean too! A mild detergent and water will wash away salt water residues that, if left on the metal surface, may cause spotting.

#2 If you haven't been washing your portlights (gasp!), and you see some spotting, you can easily remove it by using a stainless steel or chrome metal polish and a soft cloth. If you own a dremel with a buffing wheel, this will make the job go faster.

#3 RainX and similar products, applied to a newly cleaned portlight, will help keep water from sitting on the surface of the metal.

If you have any questions, email us at nfm@newfoundmetals.com or nfm@olyphen.com.
