NEW CATCH ELIMINATES RATTLING DOORS

Nothing is more aggravating than a cabin door that rattles or swings open in heavy seas. The Smart Catch, a nifty product from New Found Metals, keeps doors secure and rattle-free, but disengages safely and easily.

With its 316 stainless steel body, internal spring and soft rubber stop, the Smart Catch mounts to the wall or bulkhead. A matching striker plate attaches to the door and mates with the Smart Catch to hold the door securely open. At the touch of the toe, the catch disengages easily from the striker plate, releasing the door.

The Smart Catch comes with either a straight or pivoting striker plate. The pivoting plate, which swivels 180° and locks into place with a nut, adapts easily to areas where the door and bulkhead are not parallel. The toe release adjusts to the left or right, making the Smart Catch adaptable to nearly any door configuration, high or low.

The Smart Catch with straight striker plate retails at \$29.95. The Smart Catch with pivoting plate sells for \$39.95.
